

**Kevin**

Due to other obligations, nothing was accomplished since the last scrum, as expected. Between now and the next scrum I commit to: writing code to add searches to quick access; store lists in database; and write test cases for the login servlet. The only thing standing in our way is other assignments that are taking up a lot of our time.

**Nick**

Since the last scrum meeting, I've begun to write test cases for the restaurant radius requirement. One obstacle in the future is that I will be out of town this weekend. Before the next scrum, I will continue to work on writing test cases and will begin the implementation of this feature

**Tong**

Since last meeting I've started to work on the UI redesign for the Search Results page. Unfortunately due to a syntax error on IHSearch servlet, I was unable to load the page to make any meaningful edits since last time. Before the next scrum I will continue to work on the UI redesign for the Recipe and Restaurant pages now that the issue has been resolved.

**Aahad**

Since the last meeting, I've redesigned the UI for the Search Page and pushed the results. One obstacle is that I have large assignments due in other classes before the next scrum. Furthermore, I'm currently working on redesigning the restaurant and results tables in the results page and will have that ready by the next scrum.

**Chris**

We were unable to finish work from the last scrum, due to a conflict in our schedules. My goal is to work with Kevin on the database more from now until the next scrum, as well as refactor some of our back-end code.
